9.4 Interface and Data Format (Slave address is 0x94H)

9.4.1 AC characteristics of the SDA and SCL bus lines for I²C-bus devices

Parameter	Symbol	Standard-Mode I ² C-BUS		Fast-Mode I ² C-BUS		Unit
		Min.	Max.	Min.	Max.	
SCL clock frequency	f_{SCL}	0	100	0	400	KHz
Bus free time between STOP and START condition	t_{BUF}	4.7	-	1.3	-	μ s
Hold time (repeated) START condition. After this period, the first clock pulse is generated	$t_{HD:STA}$	4.0	-	0.6	-	μ s
LOW period of the SCL clock	t_{LOW}	4.7	-	1.3	-	μ s
HIGH period of the SCL clock	t_{HIGH}	4.0	-	0.6	-	μ s
Set-up time for a repeated START condition	$t_{SU:STA}$	4.7	-	0.6	-	μ s
Data hold time	$t_{HD:DAT}$	0	-	0	0.9	μ s
Data set-up time	$t_{SU:DAT}$	250	-	100	-	μ s
Rise time of both SDA and SCL signals	t_R	-	1000	20+0.1C _b	300	μ s
Fall time of both SDA and SCL signals	t_F	-	300	20+0.1C _b	300	μ s
Set-up time for STOP condition	$t_{SU:STO}$	4.0	-	0.6	-	μ s
Capacitive load for each bus line.	C _b	-	400	-	400	pF

Note:

- (1) All values are referred to VIH (0.7xVDD) and VIL (0.3xVDD) level.
- (2) A device must internally provide a hold time of at least 300ns for the SDA signal (referred to the VIH of the SCL signal) in order to bridge the undefined region of the falling edge of SCL.
- (3) The maximum $t_{HD:DAT}$ has only to be met if the device does not stretch the LOW period (t_{LOW}) of the SCL signal.
- (4) A fast-mode I²C-bus device can be used in a standard-mode I²C-bus system, but the requirement $t_{SU:DAT} \geq 250$ ns must then be met. This will automatically be the case if the device does not stretch the LOW period of the SCL signal. If such a device does stretch the LOW period of the SCL signal, it must output the next data bit to the SDA line $t_{R,max} t_{SU:DAT} = 1000+250=1250$ ns (according to the standard-mode I²C-bus specification) before the SCL line is released.
- (5) C_b = total capacitance of one bus line in pF.

9.4.2 Format of Data Frame

2	GND	-	Ground
3	/INT	O	Interrupt, Active low
4	SCL	I	Serial clock
5	SDA	I/O	Serial data
6	/RESET	I	Reset, Active LOW.

9.6 Initialize the CTP controller

Set Command Reload Disable = 1 (0x42H, PA1 = 0x02)
Write Initial Stetting (This step will only be executed in the first time power on sequence)
Set Command MICRO OFF (0x35H, PA1 = 0x02) to turn on internal MCU
Delay 1ms
Set command ROMRDY (0x36H, PA1 = 0x0FH, PA2 = 0x53H) to turn on internal flash.
Delay 1ms
Set command Cache Function (0xDDH, PA1 = 0x04H, PA2 = 0x02H) (*Note : PA1 is changeable)
Delay 1ms
Set command TSSON (0x83H) to starting touch sensing.
Delay 120ms
Set command TSSLPOUT (0x81H) to turn on internal power.

9.7 Data format

When finger touch, enter event will occurred and coordinate data will be calculated, and than interrupt signal appear (TSIX pull low).

Baseband should receive data when interrupt occur.

	DNC	D7	D6	D5	D4	D3	D2	D1	D0	HEX
Command	0	1	0	0	0	0	0	0	0	80
parameter	No parameter									
Description	This command causes the touch screen to enter the minimum power consumption mode. MCU interface are register are still working and keeps their contents.									
Restriction	This command has no effect when the touch screen is already in TS Sleep In mode. TS Sleep In Mode can only be left by the TS Sleep Out Command (81h). It will be necessary to wait 5msec before sending next command. This is to allow time for the supply voltages and clock circuits to stabilize. It will be necessary to wait 5msec after sending TS Sleep Out command (when in TS Sleep In Mode) before TS Sleep In command can be sent.

	DNC	D7	D6	D5	D4	D3	D2	D1	D0	HEX
Command	0	1	0	0	0	0	0	0	1	81
parameter	No parameter									
Description	This command turns off TS Sleep In mode.									
Restriction	This command has no effect when touch screen is already in TS Sleep Out mode. TS Sleep Out Mode can only be left by the TS Sleep In Command (80h). It will be necessary to wait 5msec before sending next command. This is to allow time for the supply voltages and clock circuits to stabilize. The touch screen loads all touch screen supplier's factory default values to the registers during this 5msec and there cannot be any abnormal effect on the touch screen functionality if factory default and register values are same when this load is done and when the touch screen is already TS Sleep Out – mode. It will be necessary to wait 5msec after sending TS Sleep In command (when in TS Sleep Out mode) before TS Sleep Out command can be sent.

Flow Chart		 <p>The flow chart illustrates the communication sequence between the Host and the Touch Screen for the Read One Event (ROE) command. The Host initiates the process by sending the ROE command. The Touch Screen then responds by sending four parameters sequentially: the 1st parameter, the 2nd parameter, the 3rd parameter, and the 4th parameter. A legend on the right side of the chart defines the symbols used: a trapezoid for Command, a parallelogram for Parameter, a hexagon for Touch Screen, a rounded hexagon for Action, a rounded rectangle for Mode, and a rounded rectangle with a tail for Sequential transfer.</p>

Description		This command returns touch co-ordinates what is the oldest co-ordinates information what has been stored on the stock. A returning value can be "No Event" if the stock is empty. The default assignment is list as below. The assignment of event stack also can be modified if necessary (base on the requirement of customer).

Flow Chart		 <p>The flow chart illustrates the process of reading RAE (Read All Events) from a Touch Screen. It starts in I²C Mode, where a Host sends a 'Read RAE' command to the Touch Screen. The Touch Screen then returns 'Events' data. A legend on the right defines the symbols used: a trapezoid for 'Command', a parallelogram for 'Parameter', a rounded rectangle for 'Touch Screen', a hexagon for 'Action', a rounded rectangle for 'Mode', and a rounded rectangle with a tail for 'Sequential transfer'.</p>

Note 1: Ambient temperature =25°C. LED current $I_L= 20$ mA.

Note 2: To be measured in the dark room.

Note 3: To be measured on the center area of panel with a viewing cone of 1° by Topcon luminance meter BM-7A, after 2 minutes operation.

Note 4: Definition of response time:

The output signals of photo-detector are measured when the input signals are changed from “white” to “black”(rising time) and from “black” to “white”(falling time),respectively.

The response time is defined as the time interval between the 10% and 90% of amplitudes. Refer to figure as shown below.

Note5: Definition of contrast ratio:

Contrast ratio is calculated with the following formula.

$$\text{Contrast ratio (CR)} = \frac{\text{Photo-detector output when LCD is at "White" state}}{\text{Photo-detector output when LCD is at "Black" state}}$$

Note 6: Definition of viewing angle:
Refer to figure as below.

Note 7: Measured at the center area of the panel when all the input terminals of LCD panel are electrically opened.

Note 8: The method of optical measurement

Note 9: Definition of Brightness Uniformity (B-uni):

$$B\text{-uni} = \frac{\text{Minimum luminance of 9 points}}{\text{Maximum luminance of 9 points}} \quad (\text{Note 9}).$$

12. QUALITY ASSURANCE

12.1 Test Condition

12.1.1 Temperature and Humidity(Ambient Temperature)

Temperature : $25 \pm 5^{\circ}\text{C}$

Humidity : $65 \pm 5\%$

12.1.2 Operation

Unless specified otherwise, test will be conducted under function state.

12.1.3 Container

Unless specified otherwise, vibration test will be conducted to the product itself without putting it in a container.

12.1.4 Test Frequency

In case of related to deterioration such as shock test. It will be conducted only once.

12.1.5 Test Method

12.2.2 Humidity: $55 \pm 10\% \text{ RH}$

12.2.3 Light source: Fluorescent Light

12.2.4 Inspection: Viewing distance: $35 \pm 5\text{cm}$

12.2.5 Ambient Illumination:

(1) Cosmetic Inspection: 400 ~ 600 lux

(2) Functional Inspection: 300 ~ 500 lux

12.2.6 Inspection View angle:

(1) Inspection under operating condition : $\pm 5^\circ$

(2) Inspection under non-operating condition : $\pm 45^\circ$

12.3 Definition of applicable Zones

12.4 Judgment standard

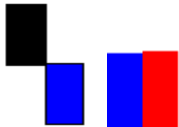

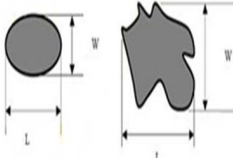

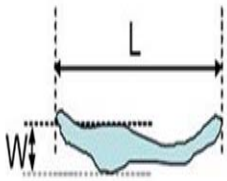

The Judgment of the above test should be made after exposure in room temperature for two hours as follow:

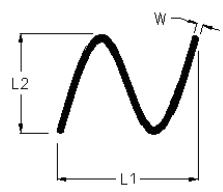

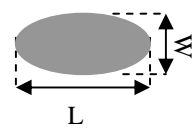

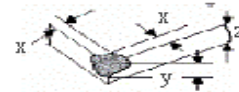

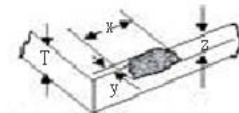

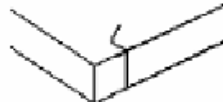

Pass: Normal display image with no obvious non-uniformity and no line defect. Partial transformation of the module parts should be ignored.

Fail: No display image, obvious non-uniformity, or line defect.

12.6 Sampling Condition

Unless otherwise agree in written, the sampling inspection shall be applied to the incoming inspection of customer.

Lot size: Quantity of shipment lot per model.

Sampling type: normal inspection, single sampling

Sampling table: MIL-STD-105E

Inspection level: Level II

Class of defects	Definition		
	Major	AQL 0.65%	It is a defect that is likely to result in failure or to reduce materially the usability of the product for the intended function.
Minor	AQL 1.5%	It is a defect that will not result in functioning problem with deviation classified.

14. PRECAUTIONS IN USE LCM

1. ASSEMBLY PRECAUTIONS

- (1) Since Touch Panel is consist of glass, please be careful your hands to be injured during handing. You must wear gloves during handing.
- (2) Do not touch, push or rub the exposed touch panel, tweezers or anything harder than HB pencil lead. And please do not rub with dust clothes with chemical treatment.
- (3) Do not stack the touch panels together. Do not put heavy objects on touch panel.
- (4) Please do not take a CTP to pieces and reconstruct it. Resolving and reconstructing modules may cause them not to work well.
- (5) Please excessive force or strain to the panel or tail is prohibited, Do not lift touch panel by cable(FPC).
- (6) Use clean sacks or glove to prevent fingerprints and/or stains left on the panel. Extra attention and carefulness should be taken while handling the glass edge.
- (7) Please pay attention for the matters stated below at mounting design of touch panel enclosure. Enclosure support to fix touch panel must be out of active area.(do not design enclosure presses the active area to protect from miss put)

2. OPERATING PRECAUTIONS

- (1) Please be sure to turn off the power supply before connecting and disconnecting signal input cable.
- (2) Please do not change variable resistance settings in CTP. They are adjusted to the most suitable value. If they are changed, it might happen CTP does not satisfy the characteristics specification
- (3) Be careful for condensation at sudden temperature change. Condensation makes damage to sensor or electrical contacted parts.
- (4) CTP has high frequency circuits. Sufficient suppression to the electromagnetic interference shall be done by system manufacturers. Grounding and shielding methods may be important to minimize the interference.
- (5) Touch the panel with your finger or stylus only to assure normal operation. Any sharp edged or hard objects are prohibited.
- (6) Operate the panel in a steady environment. Abrupt variation on temperature and humidity may cause malfunction of the panel.

3. ELECTROSTATIC DISCHARGE CONTROL

- (1) The operator should be grounded whenever he/she comes into contact with the CTP. Never touch any of the conductive parts such the copper leads on the FPC and the interface terminals with any parts of the human body.

- (2) The CTP should be kept in antistatic bags or other containers resistant to static for storage.
- (3) Only properly grounded soldering irons should be used.
- (4) If an electric screwdriver is used, it should be well grounded and shielded from commentator sparks.
- (5) The normal static prevention measures should be observed for work clothes and working benches; for the latter conductive (rubber) mat is recommended
- (6) Since dry air is inductive to statics, a relative humidity of 50-60% is recommended.

5. STORAGE PRECAUTIONS

- (1) When you store touch panel for a long time, it is recommended to keep the temperature between 0°C-40°C without the exposure of sunlight and to keep the humidity less than 90%RH.
- (2) Please do not leave touch panel in the environment of high humidity and high temperature such as 60°C 90%RH
- (3) Please do not leave touch panel in the environment of low temperature; below -20°C.

6. OTHERS

For the packaging box, please pay attention to the followings:

- a. Please do not pile them up more than 5 boxes. (They are not designed so.) And please do not turn over.
- b. Please handle packaging box with care not to give them sudden shock and vibrations. And also please do not throw them up.
- c. Packing box and inner case for CTP are made of cardboard. So please pay attention not to get them wet. (Such like keeping them in high humidity or wet place can occur getting them wet.)

7. LIMITED WARRANTY

Unless otherwise agreed between DATA IMAGE and customer, DATA IMAGE will replace or repair any of its CTP which is found to be defective electrically and visually when inspected in accordance with DATA IMAGE acceptance standards, for a period on one year from date of shipment. Confirmation of such date shall be based on freight documents. The warranty liability of DATA IMAGE is limited to repair and/or replacement on the terms set forth above. DATA IMAGE will not responsible for any subsequent or consequential events.
